https://smartgateway.hdfcbank.com/docs/smartgateway-kits-integration/web/sample-project-setup/backend-setup

API Reference Integration:-

https://smartgateway.hdfcbank.com/docs/smartgateway-api-ref-basicauth/docs/overview/integration-architecture

Classification - Public

APPLICATION INTEGRATION (ANDROID/ IOS): -
https://smartgateway.hdfcbank.com/docs/hypercheckout-mobile-sdk

MANDATORY:-

kindly ensure to implement SDK integration for mobile application. Please note certain features like UPI Intent calls shall not work on **WebView**, thus to avoid issues post go live, kindly integrate **SDK integration**.

Kindly refer to the below point for integration :-

1. Merchant needs to pass unique **customer_id** for each customer.
2. Do not use **UDF2 parameter** for additional information as it is blocked for tokenization at our end.
3. Order number and amount on response page, it should be similar to as shown on HDFC payment page.
4.The response page should display following data to end user in real-time: Order number, Amount, Success message

Pass the order Id in below format:-

1) Should be less than 21 Characters length
2) Should not contain any Special Characters
3) Can be Alphanumeric
4) Should be non-sequential.
